Abstract

The TARA2000-940-W-AUT-SAFE is a small form factor surface mount infrared laser illuminator enabling 2D and 3D use cases on a variety of platforms for in-cabin sensing applications. The integrated eye safety feature is an interlock resistive layer on the diffuser used to ensure the detection of the glass crack or detach.

1 General Description

1.1 Key Benefits & Features

The TARA2000-940-W-AUT-SAFE module is specifically designed for monochromatic, infrared, high-efficient and uniform illumination.

The compact modules are assembled with ams OSRAM state-of-the-art component manufacturing processes and are reflow solderable. These modules, using laser illumination, allow improved efficiency, reduced footprint, and overall improved system performance.

## 4 Absolute Maximum Ratings

Stresses beyond those listed under “Absolute Maximum Ratings” may cause permanent damage to the device. These are stress ratings only. Functional operation of the device at these or any other conditions beyond those indicated under “Operating Conditions” is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.

6 Package Drawings

The drawing below is showing the module size and tolerances of the TARA2000-940-W-AUT-SAFE module.

Figure 10: Package Dimensions\(^{(1)}\)

(1) All dimensions in mm.

Figure 11: 3D View of the Module
7 Application Information

7.1 PCB Pad Layout and Solder Mask Recommendation

The drawing below is showing a recommendation for pad layouts and solder mask. This is only to be used as guide and not to be considered as a firm specification.

Figure 12: Recommended PCB Pad Layout (top view)(1)

(1) All dimensions in mm.

7.2 Orientation of the Field of Illumination

The drawings below are showing the emitting area of the TARA2000-940-W-AUT-SAFE module.

The (x,y,z) coordinates refer the below directions (as illustrated also on Figure 13):

- x: Horizontal FOI direction
- y: Vertical FOI direction
- z: Perpendicular direction to x and y
Figure 13:
FOI Orientation Regarding Module Footprint

Figure 14:
FOI Projection
7.3 Information on the 2D Barcode

The figure below shows the 2D barcode on the module that can be used for traceability purpose. The 2D barcode has 13 characters and contains the following information:

- Product Code
- Year / Month / Day of manufacturing
- Lot running number and row & column coordinates located in the wafer
- Build type
- Configuration details

The module lot number can be traced back through module traceability report by referencing to the optics lot number.

Figure 15:
2D Barcode Location on the Module
8 Tape & Reel Information

8.1 Overview

Sampling Shipments: The modules are shipped in tape & MBB Bag

MP Shipments: The modules are shipped in tape & reel

Figure 16: Carrier Tape Dimensions and Overview\(^{(1)(2)(3)}\)

(1) Cover tape dimensions are 9.3 mm.
(2) Device pin 1 oriented towards tape holes.
(3) Reference material: Polystyrene carrier and Polyester clear tape
8.2 Plastic Reel & MBB Bag

Reels are individually labeled and put inside a Moisture Barrier Bag (MBB). The label information is as follows:

- Part number
- Lot number
- Date code manufacturing
- Manufacturing country
- Expire date
- VCSEL batch
- Quantity
- Supplier information

Figure 17: Shipping Label Example
8.3 MSL Label

The Moisture Sensitivity Level information is mentioned in the MBB Bag as shown in the figure below.

Figure 18:
MSL Label Example on MBB Bag

- Peak package body temperature = 260 deg C
- Control pot life after opening MBB = 1 year
- Bag seal Date Code
8.4 Label at Outer Box

The outer box containing all the plastic reels contain information as shown in the figure below.

Figure 19: Label at Outer Box Example
9 Soldering & Storage Information

9.1 Soldering Information

The TARA2000-940-W-AUT-SAFE modules have been tested for lead-free solder reflow compatibility with peak temperatures up to 260 °C.

Although an example of reflow profile is provided in the following figure, the exact reflow profile may depend on exact solder used.

Figure 20:
Solder Reflow Profile Graph Example (for reference only)

Attention

- It is not advised to proceed to cleaning after SMT reflow process.
- The modules MUST NOT be cleaned using ultrasonic cleaning.
- We suggest to use “no clean solder paste” and not to clean after SMT.
- In case a cleaning is un-avoidable, rinse with DI water, followed by a 2h bake @70 °C.
9.2 **Storage Information**

Moisture sensitivity optical characteristics of the device can be adversely affected during the soldering process by the release and vaporization of moisture that has been previously absorbed into the package. To ensure the package contains the smallest amount of absorbed moisture possible, each device is baked prior to being dry packed for shipping. Devices are dry packed in a sealed aluminized envelope called a moisture-barrier bag with silica gel to protect them from ambient moisture during shipping, handling, and storage before use.

9.3 **Shelf Life**

The calculated shelf life of the device in an unopened moisture barrier bag is 12 months from the date code on the bag when stored under the following conditions:

- **Shelf Life**: 12 months
- **Ambient Temperature**: <40°C
- **Relative Humidity**: <90%

Rebaking of the devices will be required if the devices exceed the 12 month shelf life and the Humidity Indicator Card shows that the devices were exposed to conditions beyond the allowable moisture region.

9.4 **Floor Life**

The module has been assigned a moisture sensitivity level of MSL 2. As a result, the floor life of devices removed from the moisture barrier bag is 1 year from the time the bag was opened, provided that the devices are stored under the following conditions:

- **Floor Life**: 1 year
- **Ambient Temperature**: <30°C
- **Relative Humidity**: <60%

If the floor life or the temperature/humidity conditions have been exceeded, the devices must be rebaked prior to solder reflow or dry packing.

9.5 **Rebaking Instructions**

When the shelf life or floor life limits have been exceeded, rebaking is required based on recommended baking conditions (12h at 125 °C).
10 Handling

10.1 Pick Up

Recommended pick up position on the top window (hatched area in the figure), touching directly the glass.

Figure 21: Pick Up Location
11 Appendix

11.1 RoHS Compliance

The TARA2000-940-W-AUT-SAFE module is RoHS compliant.

11.2 Safety Advice

Depending on the operational use of the device, the modules can emit highly concentrated non-visible infrared light, which can be hazardous to the human eyes. Products incorporating these modules may have to follow the safety precautions described by IEC 60825-1 and IEC 62471.

This product emits infrared radiation and has not yet been classified under IEC 60825-1. All appropriate safety precautions should be exercised in the operation and use of this product.

CAUTION

- Avoid direct eye exposure except as may be determined and directed by purchaser.
- Appropriate protective eyewear should be worn when operating.
- Use of magnifying optical instruments with this component may increase eye hazard.
- Obstructing, redirecting or focusing the optical power back to the module is considered a device misuse and can potentially lead to a health hazard.

RoHS Compliant & ams Green Statement
RoHS Compliant: The term RoHS compliant means that ams-OSRAM AG products fully comply with current RoHS directives. Our semiconductor products do not contain any chemicals for all 6 substance categories plus additional 4 substance categories (per amendment EU 2015/863), including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, RoHS compliant products are suitable for use in specified lead-free processes.

ams Green (RoHS compliant and no Sb/Br/Cl): ams Green defines that in addition to RoHS compliance, our products are free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material) and do not contain Chlorine (Cl not exceed 0.1% by weight in homogeneous material).

Important Information: The information provided in this statement represents ams-OSRAM AG knowledge and belief as of the date that it is provided. ams-OSRAM AG bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. ams-OSRAM AG has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. ams-OSRAM AG and ams-OSRAM AG suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.
