Nürnberg, 21st July 2017

Discontinuation of NanEye_GS supply

To whom it may concern,

Dear valid customers of AMS sensor products. AMS is committed to supply its products on a long term basis to its customers and assure a reliable supply chain, knowing that our products many times are essential components of larger systems and difficult to exchange or upgrade. However, as technology develops fast, supply of lower running products and products using unique technologies must from time to time be adapted or discontinued. In this scope, AMS Sensors Germany GmbH would hereby like to inform you about the discontinuation of supply without any direct replacement for all products of the NanEye_GS image sensor and related evaluation accessories. The NanEye_GS sensor family had been declared as "not recommended for new designs" and "risk of EOL" since September 2015. Due to a disruption with the one of the suppliers used in the NanEye_GS sensor production, AMS is no longer able to produce new batches of the NanEye_GS component. The remaining Stocks of this component will therefore be sold off as a Last Buy. In order to fairly attribute the remaining stock quantities to our customers, we invite all existing customers of NanEye_GS products to send their last buy orders to AMS

by 21st August 2017 via electronic mail to CIS_orders@ams.com.

AMS will assign the remaining stock by August 22nd amongst the customers wishing to place last buy orders and send the purchase order confirmations.

We apologize for any inconvenience this discontinuation may create to your business.

Kind Regards

Martin Wány
Director Marketing
